

Pressure and  
Temperature Measurement

## **WIKA presents a brochure for refrigeration and air-conditioning applications**

**Klingenberg, October 2010.**

**On the occasion of CHILLVENTA, WIKA has launched a new information brochure for manufacturers of refrigeration and air-conditioning equipment. In the 24-page booklet, the company presents its comprehensive, industry-specific range of instruments for pressure and temperature measurement.**

With reference to several application examples, such as "compressors" and "liquid-cooled condensers and evaporators", WIKA has documented its broad product portfolio. A variety of materials, components, process connections and safety standards enable tailored solutions for both domestic and international markets. Moreover, for control systems and solutions, WIKA has developed a new, mechatronic product line. There is even a calibration service on offer for operators of refrigeration and air-conditioning plants, which is also available on site.

The new WIKA brochure can be ordered as a hard copy from the website, [www.wika.com](http://www.wika.com), or downloaded as a PDF file (under "Downloads").
