

Pressure and  
temperature measurement

## **New pressure transmitter for the global OEM market**

**Klingenberg, August 2011.**

**Wika has designed its new O-10 pressure transmitter for industrial applications anywhere in the world. As a result of its specification, performance and price, it is especially suited for customers with high volume requirements.**

The O-10 works with a measuring range of 0 ... 6 to 0 ... 600 bar. A wide choice of pressure connections, electrical connections (including the popular DIN-A) and output signals guarantee the widest range of applications. In order to further ease entry into international markets, both North American and Russian approvals have been applied for the O-10.

With this new pressure transmitter WIKA is aiming mainly at manufacturers of pumps, compressors and hydraulic systems who have an annual requirement of more than 1,000 instruments of identical specification. The minimum delivery quantity is 50 pieces.

If required, the O-10 can be ordered with the customer's own company logo and model designation.
