

**Level measurement: WIKA  
extends its portfolio for the OEM market**

**Klingenberg, February 2017.**

**WIKA has extended its portfolio for industrial level measurement with new level sensors, float switches and optoelectronic switches.**

Together with the existing submersible pressure sensors and a programmable level switch with display, one of the widest offerings in this market is thus available to OEM customers. The selection of sensors with hydrostatic and reed-chain measurement technology and of magnetic and optoelectronic level switches enables product solutions for all typical OEM measuring tasks. A modular concept ensures that the instruments are only equipped with the features actually needed. This therefore enables a very good price/performance ratio.

The production process has been optimised for the demands of OEM customers. Instruments in high lot sizes can also be delivered in a short period of time.
